Subject: EPA statement

Cris / Geoff I don't know what you can do about this but this information is absolutely NOT accurate and I do not know why the spokesperson from the EPA would've released this statement. My PR firm and my business partners and our attorney are having a conference call in a few minutes to discuss a retraction but please if you can do anything to reach out to Judith Enck and explain to her the actual scenario it would be helpful. The only unit that was fumigated in March was the J building!!!!

"I can confirm that we know that methyl bromide was applied in apartments in addition to the one that we're focused on that's causing the health concern with the family," Judith Enck, regional administrator with EPA Region 2, told NBC News on Wednesday. "It was used in other apartments around the same time that it was applied here, and also in different apartments in the complex within the past year."
